PC shipments worldwide have fallen from 15 percent growth last year to just 10 percent this year, International Data reports, and the U.S. home PC market fell 24 percent in February, signaling a long drought for manufacturers--the U.S. consumer market is seen as an industry indicator. Even as the consumer market led the business market in commercializing the Internet, the business market will drive development of the wireless Web. Rather, the market for the wireless Web will grow fastest in...

Juniper Networks last week revealed its Infranet Initiative, a project that aims to devise a user-to-network interface for client/service provider interaction and an inter-carrier interface between service providers that will enable customers and providers to build an "infranet" offering both the ubiquitous connectivity of the Internet and the foreseeable performance and security of a private network. By combining mesh networking and Wi-Fi, British programmer John Anderson envisions a ...

The companies are all using the Internet to conduct sales, offer customer service, and to connect customers, suppliers, partners, and employees. Customer self-service applications are a growing trend on Web sites, and two-thirds of the E-Business 100 offer such applications for order or service tracking. Wireless Internet devices can help businesses improve internal processes as well as the services they offer consumers, and companies should begin implementing wireless technology now to ...

Despite increased federal technology spending to fight the war on terror, government technology vendors are hurting as state and local spending has been cut back due to the weak economy. Sen. John Edwards (D-N.C.) presented two cybersecurity bills Monday aimed at boosting government computer security and security-related education. Voice over Internet protocol (VoIP) is taking off as companies realize cost

savings after implementing the technology.
